

National Health and Nutrition Examination Survey

2013 - 2014 Data Documentation, Codebook, and Frequencies

Oral Health (OHQ_H)

Data File: OHQ_H.xpt

First Published: August 2016

Last Revised: NA

Component Description

The oral health questionnaire section (variable name prefix OHQ) provides personal interview data on oral health topics. These topic areas include

- Last visit to dentist or lack dental care;
- Direct conversation with dental professional about your dental health;
- Dental health perception;
- Oral cancer exam;
- Use of dental floss or dental rinse product; and
- Periodontal disease self-report.

Eligible Sample

All survey participants aged 1 year and older were eligible for the dental health perception and quality of life related questions.

Interview Setting and Mode of Administration

The Oral Health questionnaire was done, in the home, using the Computer-Assisted Personal Interview (CAPI) system.

Quality Assurance & Quality Control

The CAPI system is programmed with built-in consistency checks to reduce data entry errors. CAPI also uses online help screens to assist interviewers in defining key terms used in the questionnaire.

Data Processing and Editing

Frequency counts were checked, skip patterns were verified, and the reasonableness of responses to the questions was reviewed.

Analytic Notes

Since the OHQ questions were asked during the household interview, the interview sample weights should be used in the analysis. However, if the data is joined with data from the Mobile Exam Center (MEC), the MEC sample weights should be used.

Please refer to the [Analytic Guidelines](#) and the on-line [NHANES Tutorial](#) on the NHANES website for further details on the use of sample weights and other analytic issues.
